

Where Technology & Simplicity Connect

Arlo Solutions is a Washington, DC based small business offering a full range of cutting-edge and cost-effective Cybersecurity, Program Management, and Intelligence solutions designed to meet the demands of today's dynamic, mission-critical requirements. Arlo was established in 2014 with a vision of modernizing the government agency user experience through emerging technologies and exceptional customer service. Committed to quality, accountability, and trust, Arlo provides a seamless experience from inception through operation.

OUR CAPABILITIES

CYBERSECURITY

- Cybersecurity Program Development
- Governance, Risk, & Compliance
- Risk Management & Framework Optimization

INTELLIGENCE

- Policy Development & Analysis
- Intelligence Analysis
- Congressional Activities Support
- Security Programs Support

PROGRAM MANAGEMENT

- Program Assessment & Evaluation
- Strategic Communications
- Technology Integration & Implementation
- Data Analytics

THE DIFFERENTIATORS

★ FOUNDER-LED, PEOPLE-FOCUSED

Arlo is led by its dedicated founders who prioritize a people-first mindset, putting employees and clients at the forefront. With a full-time Employee Engagement Manager, Arlo fosters a supportive culture that drives client success.

★ TAILORED SOLUTIONS FOR COMPLEX CHALLENGES

Arlo delivers custom solutions designed for ease of execution and client success. For instance, we improved USDA's FISMA audit score by a full letter grade within a year, earning direct praise from their CISO.

★ PROVEN WARFIGHTER EXPERTISE

Arlo's CEO brings decades of warfighter support, from helpdesk technician to cybersecurity strategist. This hands-on experience equips us to navigate high-stakes environments and translate strategic visions into actionable results.

RECORD OF SUCCESS

ARLOSOLUTIONS

Chief Data and Artificial Intelligence Office | Arlo provides RMF as a Service to support the entire Authorizing Official (AO), seamlessly integrating with existing systems and processes in CDAO's agile authorization ecosystem to provide a more efficient and effective approach to risk management and cybersecurity.

Department of War (DoW) Office of the Principal Cyber Advisor (OPCA) | Our team of Subject Matter Experts (SME)s provide technical expertise and policy oversight to support the OPCA's daily operations, encompassing national security policy challenges, cyber strategy implementation, military cyberspace activities, budgetary oversight, technology performance, cybersecurity, and workforce management, with a focus on delivering analytical products and proactive management.

Office of the Under Secretary for War (Intelligence & Security) | We review, analyze, develop, and implement Defense Security policies, guidance, and training, offering expertise and recommendations on oversight of DoW Counterintelligence, Law Enforcement, and Security activities while providing operational insights to senior decision-makers and ensuring coordination across policy, legal, and operational domains.

Department of the Air Force | Arlo developed the Fast Track ATO process, offering agile solutions to improve the RMF implementation, and provided Information Assurance, Cybersecurity Engineering, and RMF transition support in line with DoW Instructions and the Clinger-Cohen Act. We also aid the AO for Cloud and DevSecOps in conducting risk assessments and providing risk recommendations for Platform One (P1) systems.

Marine Corps Systems Command | Arlo provides comprehensive business and financial management support, including evaluation, analysis, process improvement, operational support, complex financial analysis, accounting reconciliation, DAR-Q management, budget execution, audit activities, and joint funding execution, to ensure effective program management and financial operations across Marine Corps Systems Command.

DoW Office of Industrial Base Growth (IBG) | Arlo plans and executes large-scale events, such as the Small Business Training Week and Mentor-Protégé Program Summit, and various smaller outreach activities aimed at educating government and industry stakeholders on small business practices, acquisition strategies, and innovative solutions to enhance contracting opportunities within the DoW.

Army Corps of Engineers | Our cybersecurity SMEs developed and implemented a Security Classification Guide (SCG) for Sustainment Management System (SMS) team members, users, and installation community members to understand how to manage and transmit SMS data.

Defense Security Cooperation Agency | Our team of cybersecurity experts provide a variety of cyber services including governance, compliance, risk management, and operations support, to enhance IT infrastructure, ensure compliance with evolving regulations, and support the integration and efficiency of the Security Cooperation mission.

Office of Local Defense Community Cooperation (OLDCC) | Arlo provides administrative expertise including administrative compliance, business operations, training, documentation, and process analysis, to help states and communities address workforce and infrastructure needs, enhance military readiness, and support military families in alignment with Federal and DoW regulations.

Customs & Border Protection (CBP) | Our team develops and supports a Large Language Model (LLM) to help modernize and streamline position classification practices for the Office Human Resources Management (HRM), enhancing consistency and efficiency in documenting major duties and responsibilities within CBP.

National Oceanic and Atmospheric Administration (NOAA) | We support the NOAA Fisheries Office of the Chief Information Officer (OCIO) Cloud Strategy by developing a multi-year cloud implementation plan, rationalization framework, proof-of-concept solutions, governance structure, and capability assessments to streamline cloud adoption, enhance effectiveness, and align with organizational objectives.

United States Department of Agriculture (USDA) | Arlo's cybersecurity experts developed and implemented the RMF 2.0 program for the USDA OCIO Information Security Center (ISC) to bring the agency into compliance with NIST 800-37 rev 2, enhancing FISMA compliance, and streamlining audit processes through innovative, automated, and standardized approaches to risk management, security, and privacy requirements. We currently help the Information Resource Management Center (IRMC) in implementing the USDA IT Strategic Plan to align resources and activities within the USDA IT Community of Practice.
